BIBLIOGRAPHY OF INTRAVITREAL KENALOG, 1995-October 2006

Foreword:

The off label use of medications and devices is part of the practice of medicine. Not all medications have or will have studies for every possible use. The physician must use his/her judgment in weighing the risks of such use versus the benefits for the patient. Patients should be informed of such use along with the risks and benefits and alternative therapies. There may be circumstances where the use is so common that informing the patient of the off label aspects is not relevant. The use of aspirin for prophylaxis of coronary artery disease is one example.

In an effort to help practitioners make informed decisions about off label use, the Academy has compiled pertinent bibliography concerning Intravitreal Kenalog injections, with links to the abstracts.

This list is not exhaustive and recent studies may not be included. For an exhaustive list of published studies, please use PubMed (www.pubmed.gov) to search for the therapy and the disease.

Please note that the Academy cannot advise practitioners as to the practice of medicine, and it neither endorses nor condemns the off label use of particular medications or devices. If you have concerns about the off label use of medications or devices in your practice, you may wish to consult with your malpractice carrier and/or an experienced health care attorney. The Academy specifically disclaims any and all liability for injury or other damages of any kind, from negligence or otherwise, for any and all claims that may arise out of the use of this bibliography or other information contained herein."
